

Product Datasheet

REWITEC® PowerSpray

Product: REWITEC® PowerSpray
Description: Multi-purpose spray
Sales Unit: Aerosol can (100 ml)

Description

REWITEC® PowerSpray reduces friction on rubbing metal parts and protects them from wear. It is a versatile cleaning and care product, and a lubricant. The REWITEC® technology operates using innovative silicate particles, which are implemented in the metallurgical surface in a physico-chemical process under certain circumstances, such as wear, temperature and pressure. Small microscopic damages will be repaired, the roughness depth of worn metal parts will be reduced and surfaces can be rebuilt, leading to noticeable optimisation of friction and wear. The area to be treated should be pre-cleaned thoroughly. Please, shake the REWITEC® PowerSpray well and use it from a distance of 10-20 cm.

Fields of application

- Joints
- Hinges
- Floating bearings and ball-bearings
- Gear wheels
- Check rails
- Rust releasing for snug bolted connections and metal compounds
- Care product for measurement equipment and precision tools
- As a cleaning product it releases crusted and resinified lubricant residues, and it leaves a razor-thin antistatic protective film
- and many more...
