## REWITEC® DuraGear® G5

### Treatment of Manual-/Automatic Transmissions/Gearboxes and Differential Gearboxes (up to an oil volume of 5 liters)

Thank you for choosing one of our innovative products and we appreciate your confidence in REWITEC®! The REWITEC® coating concentrate will smooth out worn metal surfaces and partially restore them, provided they have been subjected to normal wear and not have been destroyed mechanically. Should your gear oil contain additives (as e.g. Teflon, Molybdenum or similar), we recommend that you carry out an oil change beforehand. By using the worldwide approved REWITEC® DuraGear® G5 with new recipe and patented metal-silicate technology you can, amongst others achieve the following:

- ✓ Lifetime extension of your gearbox
- ✓ Improved shift ability
- ✓ optimized performance

In case of any questions or suggestions, please contact us under [support@rewitec.com](mailto:support@rewitec.com) or by telephone **+49 6441 / 44 59 90**.

### Application

1. The gearbox or differential should have reached operating temperature, but should, however, have run at least 15 minutes. The REWITEC® DuraGear® G5 should have room temperature.
2. Open the gearbox/differential, place the supplied hose to the injection appliance and draw approx. 30ml oil from the gearbox/differential. Now draw the plunger of the injection appliance back to the stop enabling air to get into the injection appliance.
3. Shake well the injection appliance for about 1 minute, enabling the oil to mix well with the concentrate.
4. Subsequently press the whole content of the injection appliance into the gear/differential and close the opening.
5. Then drive the vehicle for about 15 minutes and shift through all gears.
6. The treatment will be finished after approx. 1.500 kilometer (do not carry out an oil change during this time).
7. Retreatment with REWITEC® DuraGear® G5 should take place latest after 2 years or after 20.000 kilometers.

#### **Safety Advice:**

Must not be handled by children. Do not drink the liquid. Avoid skin contact. May be slightly irritating to the eyes. Rinse thoroughly with water and consult a doctor in case the irritation does not disappear. Do not pour into or place next to open fire.

#### **Storage Advice:**

Please store at room temperature.  
Best before: see sticker.
